#### These ventilators are recommended for midsized nonresidential spaces or dedicated zones within larger buildings such as classrooms, common areas of

The H1800A-Fi-EC-N (aluminum core) heat recovery

ventilator provides up to 2100 cubic feet per minute of

of stale indoor air, creating a well-balanced ventilation

system. The highly efficient and quiet variable-speed

EC motors use on average 50% less electricity of the

H1800A-Fi-N at low speed, significantly increasing return

fresh outdoor air while exhausting an equivalent amount

residential complexes and indoor parking garages.

Designed for versatile indoor installation, Aldes light commercial ventilators can fit almost anywhere and still provide easy access to the internal components for quick maintenance. The units also offer a choice of five continuous operation speeds and a demand-controlled high speed exchange mode.
